

## SolarInvert Energy Solutions

# Lithuanian power emergency energy storage manufacturer

## Overview

---

The Fluence Storage system is operating as an integral part of the Lithuanian power transmission system – increasing grid reliability through voltage management and emergency reserve, supporting Lithuania's energy independence, advancing decarbonisation agenda, and synchronisation with CEN. How many battery energy storage systems are there in Lithuania?

The four battery energy storage systems (BESS), 50MW/50MWh each, have been handed over by Fluence and are now providing services to Litgrid, the transmission system operator (TSO) in Lithuania. They followed a smaller, 1MW/1MWh pilot project to test the use case back in 2021.

Which power plant provides energy storage in Lithuania?

Kruonis Pumped Storage Plant provides energy storage, averaging electrical demand throughout the day. The pumped storage plant has a capacity of 900 MW (4 units, 225 MW each). Kaunas Hydroelectric Power Plant has 100 MW of capacity and supplies about 3% of the electrical demand in Lithuania.

What is Lithuania's first commercial battery storage facility?

Located near Vilnius, this project will be the country's first commercial battery storage facility and is expected to increase Lithuania's total storage capacity by approximately 50%. The system is scheduled to begin operations by the end of 2025.

How will Lithuania achieve the instantaneous electricity reserve of Isolated mode?

The instantaneous electricity reserve of isolated mode for Lithuania will be ensured by the electricity storage facilities system with the 200 megawatts (MW) and 200 megawatt-hours (MWh) capacity. If needed, the high-capacity reserve storage facilities will start supplying power immediately – within 1 second.

How much electricity does Lithuania use?

Although the average electricity consumption in Lithuania is around 1500 megawatts, the installed capacity of both solar and wind power plants is expected to exceed 2000 megawatts in 2025, enabling surplus electricity to be stored and supplied to consumers during peak hours.”.

How much balancing capacity does Lithuania need?

So the whole region would need around 1GW of balancing capacities but Lithuania alone will need around 700-800MW of capacity for FRR. We have applications to build 800-900MW of storage, and those with a letter of intent (LOI) and bank deposit total around 150MW today.
