PV project component layout

Overview

The RERH specifications and checklists take a builder and a project design team through the steps of assessing a home's solar resource potential and defining the minimum structural and system components needed to support a solar energy system.

The Renewable Energy Ready Home (RERH) specifications were developed by the U.S. Environmental Protection Agency (EPA) to assist builders in designing.

These specifications were created with certain assumptions about the house and the proposed solar energy system. They are designed for builders.

EPA has developed the following RERH specification as an educational resource for interested builders. EPA does not conduct third-party verification of the.

Builders should use EPA's online RERH SSAT to demonstrate that each proposed system site location meets a minimum solar resource potential. EPA has.

Designing a solar PV system involves more than just placing panels on a roof. This comprehensive guide walks you through each critical step—site assessment, load analysis, component selection, system sizing, and compliance with safety codes.
