

## SolarInvert Energy Solutions

# 10MW-40MWh discharge energy storage power station

## Overview

---

What is a 10 MWh Bess battery?

- **0.25C Rate:** At a 0.25C rate, the battery charges or discharges over four hours. In this scenario, a 10 MWh BESS would deliver 2.5 MW of power for four hours. This slower rate is beneficial for long-duration energy storage applications, such as storing excess renewable energy generated during off-peak times for use when demand is higher.

What is a 10 MWh Bess?

A 10 MWh BESS at 0.5C provides 5 MW of power for two hours. This moderate rate suits applications like load leveling and peak shaving, where a steady energy output over a longer duration is advantageous. • **0.25C Rate:** At a 0.25C rate, the battery charges or discharges over four hours.

What is power capacity & energy capacity?

A fundamental understanding of three key parameters—power capacity (measured in megawatts, MW), energy capacity (measured in megawatt-hours, MWh), and charging/discharging speeds (expressed as C-rates like 1C, 0.5C, 0.25C)—is crucial for optimizing the design and operation of BESS across various applications.
