

## SolarInvert Energy Solutions

# 1kW wind-solar hybrid system

## Overview

---

What is a solar and wind hybrid system?

Solar and wind hybrid systems incorporate a Photovoltaic (PV) solar panel with a domestic wind turbine. These are usually placed on the rooftops of homes and businesses. A solar and wind hybrid system generates energy all year round rather than just in daylight hours. What's more, the two energy sources do a very good job of supporting one another.

What is a 25kW hybrid solar system?

A 25kW hybrid solar system combines the features of on-grid (with net-metering) and off-grid (with battery) solar systems. This solar system was named the hybrid solar system because of its crossover properties. It includes net-metering as well as solar batteries, and can be operated with or without a government grid.

How does a hybrid 15kW solar system work?

In a hybrid 15kW solar system, there is net-metering as well as solar batteries. When your solar panels produce more electricity than you consume during the day, you can store the excess in a solar battery. When the batteries are fully charged, the excess power will be automatically exported to the grid.

How much energy does a wind solar hybrid system produce?

Now let us assume this wind solar hybrid system is grid connected with batteries and do a cost analysis/payback from such a system. As per 'global solar atlas', a 1kW system in Colorado can produce 1800 kWh per year. Therefore, a 2kW system will generate around 3600 kWh per year of electricity in Colorado, USA.

How do solar power and wind power differ?

Solar power production is estimated based on areas with class II solar resources, while wind power production is estimated based on annual average

wind speed. This difference in estimation factors is due to the distinct nature of solar and wind power generation.

## 1kW wind-solar hybrid system
