

## SolarInvert Energy Solutions

# 2 square photovoltaic panel price

## Overview

---

A small residential solar panel system costs around \$14,210 before considering any financial incentives. On the bright side, that price effectively drops to \$9,937 after considering the full federal solar tax credit. Depending on your household energy needs, you might need a larger or smaller system. How much does a CPV solar system cost?

Concentrated photovoltaic (CPV) panels are \$0.80 to \$1.10 per watt. While not as well-known as other types of panels, CPV panels are highly efficient and may grow in popularity. A 6 kW solar system would cost \$4,800 to \$6,600. A single solar cell costs about \$0.30 and most panels use 60 or 72 cells. The more cells in a panel, the higher the cost.

Are monocrystalline solar panels expensive?

Currently, monocrystalline panels are the most cost effective. While they are the most expensive, they are also the most efficient (which helps you save the most money). What are the three types of solar panels?

.

Are polycrystalline solar panels better than monocrystalline panels?

Polycrystalline panels were once popular but have been phased out for more efficient panels. Monocrystalline panels use a single silicone crystal, whereas polycrystalline panels use multiple crystals, which saves you money up front but doesn't perform as well. Refer to the following table to see current solar panel costs by type:
