

SolarInvert Energy Solutions

Africa can place outdoor power supply

Overview

Why do Africans need solar power?

About 600 million Africans lack reliable access to electricity; in Nigeria specifically, almost half of the 230 million people have no access to electricity grids. Today, solar has become cheap and versatile enough to help bring affordable, reliable power to millions — creating a win-win for lives and livelihoods as well as the climate.

Does Africa have solar power?

Thanks to its sunny, equatorial position, the African continent has an immense potential for solar power, shown here in kilowatt-hours. However, solar power contributes less than 3 percent of the electricity generated in Africa. (Image license: CC BY-SA 4.0).

Should Africa phase out fossil fuels?

Together, Africa's countries account for less than 5 percent of global carbon dioxide emissions, and many experts, like Malo, take issue with the idea that they need to rapidly phase out fossil fuels; that task should be more urgent for the United States, China, India, the European countries and Russia, which create the bulk of emissions.
