Overview

How is energy used in Albania?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Why does Albania need to import energy?

Changing weather patterns over the years have forced the country to import energy to cover domestic needs, as a lack of storage capacity requires Albania to sell its generated power during peak months of production.

Is the energy sector a sustainable source of growth in Albania?

The National Energy Strategy 2018 – 2030 states that the energy sector has the potential of being a sustainable source of growth for the country over the short to medium and long-term. Albania has the potential for increasing the amount of electricity produced domestically and therefore decreasing necessary energy imports.

Who regulates the power sector in Albania?

The most significant institutions in setting policy and regulation in the power sector in Albania are the Ministry of Infrastructure and Energy (“MIE”) and the Energy Regulatory Authority (“ERE”).

Is Albania a net energy importer?

Today, Albania remains a net energy importer as domestic energy production is not able to meet demand. When it comes to renewable energy imports, Eurostat data shows that the country ranks 8 th in Europe.

Does Albania have a potential for renewable resources?

Currently only hydropower makes a significant contribution to the current

energy consumption in Albania. However, the country has significant potential for renewable resources in the form of wind, solar and biomass. • How EU directives affect the development of RES?

Albania s energy storage power exports

Albania: Energy Country Profile

Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for ...
