Andorra communication project base station installation

Overview

What is a pico cell base station?

A Pico cell base station is a small wireless tower that provides improved phone and Internet services to local areas such as homes or small offices; More specifically for specific rooms. It is a very small, low-power station that works like a personal signal booster that improves call and Internet quality in limited space.

How does a base station work?

It usually connects the device to other networks or devices through a dedicated high bandwidth wire of fiber optic connection. Base stations typically have a transceiver, capable of sending and receiving wireless signals; Otherwise if they only send the trailer it will be considered a transmitter or broadcast point only.

What are the components of a base station?

Power Supply: The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

Andorra communication project base station installation

Base Station Installation & Maintenance Test Solutions

Installation and the upgrading of base stations are underway to expand to 5G coverage. To ensure stable communication between a base station and connect with the stability of mobile ...
