

SolarInvert Energy Solutions

BESS a rooftop photovoltaic panel in Central Europe

Overview

What is the regulatory landscape for Bess in Europe?

Expert Philipp Kraemer of CCE shares his analysis. The regulatory landscape for BESS in Europe is influenced by EU directives aimed at accelerating the shift to cleaner energy sources. Notable policies include the Clean Energy for All Europeans Package and the European Green Deal, which emphasize the uptake of energy storage technologies.

How does a Bess development help a country's energy infrastructure?

BESS developments stabilise a country's energy infrastructure. For instance, Europe's first commercial BESS development, Schwerin Battery Park, in Germany was able to restore power to a grid in the midst of an unexpected blackout.

Does Europe need a Bess capacity?

A significant BESS capacity has to come online if Europe is to reach its climate targets, with a central role for wind and solar in the power generation. This expected pivotal role for BESS has attracted a wave of significant investment appetite. A wave that, so far, has spread unevenly across Europe, not just because of the differences in weather.

How much does Bess cost in Europe?

In early 2024, the price of residential BESS offered to end consumers in Europe ranged widely, from €400 to more than €1,200 per kilowatt-hour (kWh) (Exhibit 2). Historically, European OEMs built trust-based brands by highlighting their "made in Europe" status and rode the first-mover wave over the past ten years.

What is a Bess installation?

The BESS installation is a joint venture between Ardian's ACEEF and Lappeenranta Energia, a Finnish municipal energy company. The Mertaniemi

project is expected to come online in the spring of 2025 and is located near the Mertaniemi power plant in Lappeenranta.

How are European Bess OEMs putting cost pressure on Europe?

These international players are placing cost pressure on European BESS OEMs by driving down prices. In early 2024, the price of residential BESS offered to end consumers in Europe ranged widely, from €400 to more than €1,200 per kilowatt-hour (kWh) (Exhibit 2).
