BESS revenue for Dutch energy storage power stations

Overview

What are the economic opportunities for Bess assets within a Dutch electricity market?

We highlight the economic opportunities for BESS assets within one of the Dutch electricity markets in this article. The Dutch electricity market is undergoing a significant shift towards renewable energy, primarily solar, wind, and other sustainable sources.

Is the Netherlands a good place to invest in battery energy storage?

The Netherlands offers attractive revenue potential for Battery Energy Storage System (BESS) projects, thanks to a growing share of cheap renewable power sources combined with expensive gas-powered plants, resulting in relatively high price volatility on the electricity markets.

Will Dutch Bess capacity reach 5GW by 2030?

By 2030, total Dutch BESS capacity could potentially reach up to 5GW. This, however, will depend on investor confidence regarding the revenue potential and developments in the Dutch regulatory environment. Revenues from ancillary services are still relatively stable, but the threat of cannibalization is looming.

Why do Dutch Bess projects face high grid fees?

Dutch BESS projects face high grid fees and lack access to contracted revenue streams through capacity markets. Moreover, the limited availability of new grid connections due to severe grid congestion poses additional challenges for potential BESS investors.

What drives Bess revenue stack performance in 2021-22?

There are some important common drivers across all European power markets that have shaped BESS revenue stack performance across the last 3 years. All markets generated exceptional BESS returns in 2021-22 driven by a parallel:

Power crisis – power market tightness given e.g. major French nuclear outages.

Is the Dutch Bess market a good investment?

This document is for information purposes only and is not, and should not be construed as, an offer, invitation or recommendation. The Dutch BESS market offers strong potential amid rising flexibility needs, but faces grid and policy hurdles. Still, investor interest and regulatory innovation grow.
