Base station photovoltaic panel installation price

Overview

The average solar power installation price ranges from \$2.74 to \$3.30 per watt in 2024, with most residential systems costing between \$16,500 and \$30,000 before incentives. After applying the 30% federal tax credit, homeowners typically pay between \$12,600 and \$21,000 for a complete system. How much does solar panel installation cost?

On the high end, solar panel installation can cost over \$40,000. On the low end, it only costs a few thousand. It all depends. Additionally, none of these prices account for incentives like the federal investment tax credit (ITC), which can make your solar system up to 30% more affordable.

What is NREL's PV cost benchmarking work?

NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up approach.

How do I determine the cost of my ground-mount solar system?

The best way to determine the cost of your ground-mount solar system is to request a free custom quote. With a custom quote, you'll see the complete installation cost, all available incentives, and the payback and ROI. Not ready for a quote?

.

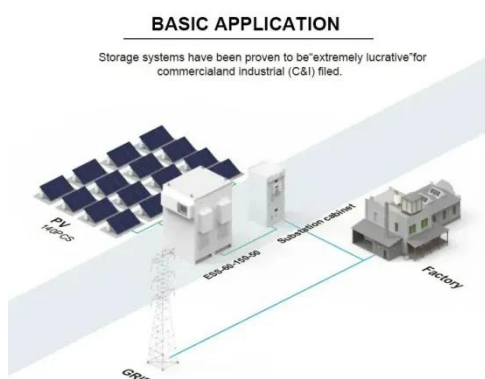

Do ground-mounted solar panels cost more?

Generally, ground-mounted solar panels will cost more to install than an equally sized roof-mounted system. This is partly due to the structure on which the solar panels are installed. A rooftop system is supported by the roof, and the building's structure, meaning erecting a supporting structure is unnecessary.

How much does it cost to remove and reinstall roof panels?

It cost \$5,000 to remove and reinstall the panels after the roof was replaced. "If I had known the roof was in such bad shape, I would've replaced the roof before installing the panels," Devin told us.
