Base station project outdoor environment inspection

Overview

What is a base station inspection?

The changes being experienced in weather conditions and the aging of materials may cause damage to the base station including toppling of the tower body or antenna, cable breakage, structural corrosion, etc. Timely and periodic inspections are necessary for the network operators. The typical base station inspection (BSI) services include:.

What is a base station tower inspection?

The personnel climb the base station tower to perform close-range inspection on the tower body, antenna, feeder, bracket and other components, which is a long-term, high-intensity and high-altitude operation. Low efficiency and high cost.

Why should you use enviroscience's environmental inspection services?

EnviroScience's environmental inspection services can help achieve, maintain, and document environmental compliance for your construction project, as well as track, sample, and characterize your construction and demolition debris.

How to protect communities and installation mission from noise impacts?

The primary strategy for protecting communities and installation mission from noise impacts is long-range land use planning. The Installation Compatible Use Zone (ICUZ) program is the primary mechanism for implementing a noise program at the installation level.
