

## SolarInvert Energy Solutions

# Benin bifacial solar panels

## Overview

---

What are bifacial solar panels?

The bifacial solar panel is one of the higher-efficiency advanced modules and has been constantly evolving for the past several decades. This article will help you get to know bifacial panels inside out. Meanwhile, you will have a better sense of their adoption in projects, and how this technology is fused with other innovations.

What is bifacialize solar?

The term 'bifacialize' isn't widely used in the industry, but it refers to the process of designing and manufacturing solar panels to harness energy from both the front and back sides, boosting overall efficiency and energy output.

Should bifacial solar panels be aligned?

Ideally, bifacial panels should be aligned to ensure maximum sunlight exposure on both sides throughout the day. Plus, the tilt angle should be optimized based on the local latitude to maximize solar radiation capture. Bifacial solar panels are more sensitive to shading on either side.

Do bifacial panels increase energy production?

By capturing light from both sides, bifacial panels can increase energy production by 5-30% compared to monofacial products, depending on installation conditions and surface reflectivity. When to Use Bifacial Panels?

These panels are particularly advantageous in certain scenarios due to their ability to capture sunlight from both sides.

How do bifacial solar modules work?

Bifacial solar modules can capture sunlight from both sides, reducing their heavy reliance on optimal tilting angles. This feature enables them to be installed vertically to harvest energy at various angles of light paths. When

configured with high-strength structural glass, they can turn out to be one type of 'solar facades'.

Can bifacial panels be installed vertically?

Vertical & Special Installations: With relatively less reliance on direct light, bifacial panels can be installed vertically, which is particularly beneficial in special installations such as vertical street lights, bifacial solar fences and bifacial solar facades.
