

## SolarInvert Energy Solutions

# British local energy storage battery cost performance

## Overview

---

IRENA is tracking the current costs and performance of BESS and is monitoring how the value of these systems in different applications and international markets is likely to evolve over time with increasing self-consumption of rooftop solar PV, the provision of grid services such as frequency regulation or ramping needs, as well as peak power demand shaving in industry and alike. Are battery energy storage revenues increasing in Great Britain?

Battery energy storage revenues in Great Britain reached a rate of £88k/MW/year in January 2025, marking a 5% increase from December 2024 and the first back-to-back monthly revenue increase since early 2024. Source: Modo Energy Note: Monthly ME BESS GB revenues since January 2024.

How long do batteries last in Great Britain?

Average duration of batteries in Great Britain stood at 1.4 hours by the end of 2024. 98% of new battery capacity added in Q4 had a duration of at least two hours, highlighting a shift toward longer-duration storage for greater flexibility.

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

Where are Scotland's largest battery energy storage systems located?

Scotland is hosting three of Europe's largest battery energy storage systems: Projects: Coalburn 2 in South Lanarkshire, Devilla in Fife and Coalburn 1 are already under construction. Capacity: Co-located total power capacity of 1.5GW and 3 GWh of energy storage capacity. Timeline: Effective by 2027-28.
