

## SolarInvert Energy Solutions

# China Solar Base Station EMS Construction

## Overview

---

Will China build a solar power station in space?

It's coming to a cosmos near you in 25 years! China is currently planning to build a gigantic solar power station in space. To get parts of the array out of our atmosphere, scientists are working on a reusable heavy lift rocket called the Long March-9. The solar array project is just one small part of China's larger space mission.

What is China's space-based solar power project?

China is on a bold mission to revolutionize renewable energy through its Space-Based Solar Power (SBSP) initiative. The plan involves constructing a colossal 1-kilometer-wide solar power station in geostationary orbit, approximately 36,000 kilometers above Earth.

Why is China investing in a space solar power station?

China is investing in SBSP to secure a continuous and sustainable source of renewable energy, reduce dependence on fossil fuels, and lead the global clean energy race. The space station could provide power 24/7 and help meet rising energy demands. Is China's space solar power station safe for humans and the environment?

.

When did China start building a space solar power station?

In June 2021, China initiated the construction of its first experimental space solar power station in Bishan. In November 2023, researchers from the Xian University of Electronic Science and Technology published test results for the "Chasing Sun Project," the world's first complete ground verification system for space solar power.

Why is China launching a solar power station in geostationary orbit?

As countries grapple with climate change, energy shortages, and increasing energy demands, China is positioning itself at the forefront of renewable energy innovation with its visionary approach. The cornerstone of China's plan is a one-kilometer-wide solar power station designed for deployment in geostationary orbit.

Can China use space-based solar power?

China aims to launch a prototype of its space-based solar power station around 2030, with plans to scale up to a full-scale 10,000-ton power plant by 2050. Can other countries use space-based solar power?

In the future, space-based solar power could be shared globally.
