China battery price container base station

Overview

How much does a battery cost in China?

Indeed, the average global per-kilogram export price of China's lithium-ion batteries fell from \$32.9 in 2020 to \$20.1 in 2024. Remarkably, Chinese per-kilogram battery export prices to the United States are the lowest in the world—only continental Latin America even comes close. Tariffs don't seem to be playing a major role.

How much energy storage capacity will China have by 2024?

Separate figures, from the National Energy Administration (NEA) cited in state-owned Xinhua News Agency, said that the total installed capacity of new energy storage projects reached 73.4GW by the end of 2024. With an average duration that indicates a total capacity of around 73.4GW/168GW.

Should the US put tariffs on Chinese-made Li-ion batteries?

When placing tariffs on Chinese-made Li-ion batteries, however, policymakers should ensure that the United States, working closely with allies and partners, develop a US battery complex. Outcompeting China in batteries, a vital military and energy technology, is critical for US and allied security.

Are Chinese lithium-ion batteries cheaper than US batteries?

Strikingly, the per-kilogram prices of Chinese lithium-ion batteries exported to the United States are lower than the same product sold to any other market.

What is China's battery tariff rate?

But storage batteries—which are China's primary Li-ion shipment to the United States—are not subject to the higher rate until 2026; they currently face an effective tariff rate of only 10.9 percent. Importantly, China's per-kilogram battery export prices vary depending on the type of batteries supplied to different markets.

Is China's largest battery maker a military company?

Earlier this month, the US Department of Defense (DOD) designated China's largest battery maker, CATL, as a military company. The DOD may have made the designation due to CATL's potential collaboration with the Chinese navy on lithium-ion battery-powered submarines.
