Communications shut down the 5G base station at night

Overview

Why is China putting a 5G base station to sleep?

What many people don't realise, though, is that it's also expending a lot more energy for Chinese telecom companies. At the beginning of August, a China Unicom branch announced that it would put some of its ZTE 5G base stations to sleep between 9pm and 9am to reduce electricity costs in the city of Luoyang.

Do 5G base stations use more energy than 4G?

A recent white paper from telecom equipment maker Huawei illustrates the problem: 5G base stations use up to three-and-a-half times more energy than 4G infrastructure. Part of the problem is that this new generation of mobile connectivity requires more densely placed base stations.

Does China have a 5G network?

China first launched what it called the world's largest 5G network at the end of last year with subsidised plans. The technology is meant to herald the arrival of ultra-fast wireless broadband internet, but availability remains limited.

Why is low band LTE so important?

Because of that it has a much smaller generator and to prolong the time before it runs out of fuel (roads could be impassable during an extended winter outage) only low band LTE stays on. It draws the least amount of power yet still allows people to call relatives, 911, etc.

Communications shut down the 5G base station at night

What is a 5G base station?

A 5G Base Station, also Known as A GNB (Next-Generation NodeB), is a fundamental component of the fifth-generation (5G) Wireless ...
