

SolarInvert Energy Solutions

Container power generation installation and construction

51.2V 300AH

Overview

What is a containerized generator set?

() On a regular basis, containerized generator sets (CGS) are placed onboard ships to provide replacement power in case of damage to one of the ship's generator sets, or additional power, e.g. to provide power to extra deck equipment or reefer containers.

What are the benefits of a single container power generation system?

The entire power generation system, including the generator, fuel tank, and control systems, is integrated into a single container. This portability is especially advantageous for industries that require power at multiple locations or for temporary projects such as construction sites, events, or disaster response operations.

What is a generator container?

These containers are designed to protect the generator from external elements, ensuring secure operation in diverse environments. The generator sets within these containers can vary in size and capacity, making them suitable for a wide range of applications.

Why do generators need a container structure?

The robust container structure provides enhanced security and durability to the generator set. This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors.

Why should you use a containerised generator set?

This protective enclosure safeguards the equipment from adverse weather conditions, dust, and other external factors. Additionally, the container offers increased security against theft or vandalism, making containerised generator sets suitable for applications where equipment safety is a concern.

Where can a portable power container be used?

The MOBIPOWER portable power container can be used virtually anywhere on the planet and will produce and store all the power you will need.
