Overview

How is Costa Rica transforming its energy portfolio?

Costa Rica is taking bold steps to diversify its energy portfolio. The country is integrating wind, solar, and geothermal solutions to strengthen its power grid. These efforts aim to reduce reliance on any single source and ensure long-term sustainability.

How can Costa Rica improve its energy supply?

Adaptive measures like diversifying energy sources and improving infrastructure are also underway. These efforts aim to ensure a stable energy supply while minimizing environmental impact. Despite current setbacks, Costa Rica continues to lead by example in the global shift toward clean energy.

When did Costa Rica start producing electricity?

In the 1950s, the nationalization of energy production under the Costa Rican Electricity Institute (ICE) marked a turning point. Early investments in hydroelectric plants, such as those along the Reventazón River, laid the foundation for clean energy.

How is Costa Rica addressing climate challenges?

By combining multiple sources, Costa Rica is enhancing its resilience to climate challenges. Recent investments include a 305.5 MW hydroelectric facility and smart grid initiatives. The government is also funding research and development to improve energy efficiency. These efforts are expected to boost the country's renewable energy matrix by 2040.

How does El Nio affect energy production in Costa Rica?

Reduced rainfall and prolonged El Niño events have disrupted water flows, impacting energy production. In December 2022, technicians from the Costa Rican Electricity Institute (ICE) observed a sharp decline in reservoir levels.

Reduced river flows have diminished the efficiency of hydroelectric plants.

Does Costa Rica rely on fossil fuels?

For years, Costa Rica has relied on diverse energy sources like hydroelectric power, wind, and geothermal energy. These resources have helped the country reduce its reliance on fossil fuels and cut carbon emissions significantly. However, challenges like reduced rainfall and climate change are testing this model.
