

## SolarInvert Energy Solutions

# Czech lithium battery factory energy storage power supply

## Overview

---

Where is the largest battery storage facility in the Czech Republic?

Construction of a facility that will include the largest battery storage facility in the Czech Republic and gas combustion turbines began at the end of March near Vraňany in the Mělník region. The investor is the Czech energy group Deccí.

Why is the battery storage industry growing in Czechia?

The Battery Storage industry in Czechia is growing rapidly, driven by the country's commitment to renewable energy and sustainability. Key considerations include the regulatory framework, which supports the integration of battery storage systems into the energy grid.

Should a battery cell factory be built in the Czech Republic?

Electromobility is a reality, and it is very important that one or several battery cell factories be built in the Czech Republic. Every factory can provide work for more than two thousand people directly at the plant and thousands more jobs will be created in downstream sectors.

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

Why is Czech energy-accumulation so expensive?

According the report, the main reason is the regulatory framework biased in favor of classical energy models. The Czech Republic is no exception. It is fair to say that none of available energy-accumulation technology is perfect yet, and cost-effectiveness can be reached under specific conditions only.

What is the Czech energy mix?

While the goal of EU funds is to support a sustainable low-carbon-emission economy and ensure energy security by utilizing alternative energies, the Czech approach is different. As described in the State Energy Policy, the future Czech energy mix will be primarily based on nuclear power with a goal of reaching 50% of the energy supply with nuclear.
