

## Overview

---

In 2021, 1,595 energy storage projects were operational globally, with 125 projects in construction. 51% of operational projects are located in the U.S. 10 California leads the U.S. in power capacity with 1.

What is energy storage operation & maintenance?

2.4.3.2. Operation & Maintenance Maintaining energy storage systems in a good working order is essential in order to have the facility operate as planned or contracted —both on time and according to the usage profile required.

Should energy storage projects be developed?

However, energy storage project development does bring with it a greater number of moving parts to the projects, so developers must consider storage's unique technology, policy and regulatory mandates, and market issues—as they exist now, and as the market continues to evolve.

How many battery energy storage projects are there?

The U.S. has 575 operational battery energy storage projects 8, using lead-acid, lithium-ion, nickel-based, sodium-based, and flow batteries 10. These projects totaled 15.9 GW of rated power in 2023 8, and have round-trip efficiencies between 60-95% 24.

How long do energy storage facilities need to discharge power?

Energy storage facilities providing this service are designed with fast0 power ramping ability rather than longer duration. Originally requiring only, a minimum of 15 minutes of discharge duration, regulatory changes have increased the requirements of the service to 30-minutes to 1-hour, depending on jurisdiction.

How do I develop an operation program for energy storage assets?

Developing an operation program for energy storage assets will encompass a number of components. A central components will be a centralized Network Operating Center (NOC) that provides insights leveraging the energy

management system that is used to manage and control the different assets in the portfolio.

Are energy storage projects different than power industry project finance?

Most groups involved with project development usually agree that energy storage projects are not necessarily different than a typical power industry project finance transaction, especially with regards to risk allocation.
