

## SolarInvert Energy Solutions

# Energy storage battery liquid cooling equipment manufacturer

## Overview

---

What is a battery energy storage system?

Battery energy storage systems (BESS) ensure a steady supply of lower-cost power for commercial and residential needs, decrease our collective dependency on fossil fuels, and reduce carbon emissions for a cleaner environment.

What is a liquid-cooled Bess system?

The liquid-cooled BESS—PKENERGY next-generation commercial energy storage system in collaboration with CATL—features an advanced liquid cooling system for heat dissipation.

Can a battery energy storage system fit a closed-loop air conditioner?

A leading manufacturer of battery energy storage systems contacted Kooltronic for a thermal management solution to fit its rechargeable power system. Working collaboratively with the manufacturer, Kooltronic engineers modified a closed-loop air conditioner to fit the enclosure, cool the battery compartment, and maximize system reliability.

What is an all-in-one battery energy storage system?

This comprehensive system ensures the safety of both equipment and personnel at all times. All-in-one battery energy storage systems are pre-installed at the factory, significantly reducing on-site commissioning time. Upon arrival, the system can be easily integrated into the grid, allowing for quick and seamless deployment.

Can battery energy storage systems be used outside?

However, the electrical enclosures that contain battery energy storage systems are often located outdoors and exposed to extreme temperatures, severe weather, humidity, dirt, and dust. Like most heat-sensitive electrical equipment, operation within hot and cold temperatures can, over time, reduce

power output and longevity.

Why is liquid cooling important?

It is because liquid cooling enables cells to have a more uniform temperature throughout the system whilst using less input energy, stopping overheating, maintaining safety, minimising degradation and allowing higher performance. Both solutions safely operate in cold and hot regions, between -25 and +50°C.
