

SolarInvert Energy Solutions

Energy storage projects help

Overview

Is energy storage a reality?

New developments and rapidly declining costs for storage technologies make great potential for energy storage a reality, accelerating storage deployments for renewable energy projects worldwide. UL Solutions offers a suite of services to support your energy storage projects.

What is energy storage project deployment?

ESTAP facilitates the deployment of energy storage projects through public/private and state/federal partnerships. This is done by matching state-supported large-scale energy storage project proposals with the research needs of Sandia National Laboratories and DOE's Energy Storage Research program in the Office of Electricity.

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

What is the long-duration energy storage project?

The project is the largest grant awarded under the Long-Duration Energy Storage Program, funded by Governor Gavin Newsom's historic multi-billion-dollar commitment to combat climate change. Investing in new technologies such as long-term energy storage will help California achieve its goal of a clean energy system by 2045.

What are energy storage technologies?

Energy storage technologies have the unique capabilities to keep the lights on when the power grid is under stress. In both Texas and California, energy

storage technologies have prevented black outs during significant heatwaves—keeping people safe, power affordable, and the power on for businesses.

Why is energy storage important?

Energy storage serves important grid functions, including time-shifting energy across hours, days, weeks, or months; regulating grid frequency; and ensuring flexibility to balance supply and demand.
