Export outdoor power supply to North America

Overview

Are there more US electricity import States than export States?

There are more US electricity import states or districts than export states, by a ratio of 22 to 14. The 3 leading import states (Minnesota, Vermont and Washington state) spent over half (52.8%) of electricity bought by all American power-importing states during 2024.

How do I get an electricity export authorization?

Export authorizations issued since 1995 authorize the last entity that holds title to electricity inside the United States to export the electricity using a specific transmission line or collection of lines. Requests for export authorizations not currently on the website should be addressed to electricity.exports@hq.doe.gov.

How do they export electricity?

At the heart of electricity export lies a vast network of high-voltage power lines known as interconnectors. These cables, often running underground or under the sea, connect the national grids of two or more countries.

Can I export electric energy if I have a transmission line?

DOE must also comply with NEPA before granting authorization to export electric energy. However, in many instances DOE is able to cite a categorical exclusion (10 CFR 1021.410) for exports over existing international transmission lines. DOE encourages electronic submissions of applications for Export Authorization.
