French grid energy storage projects 2025

Overview

Five projects totaling 20 MW will deliver new battery storage capacity across France. The portfolio enhances grid flexibility, local resilience, and supports EU decarbonization goals. Who is delivering a battery energy storage system in France?

China's Envision Energy has been selected by Kallista Energy to deliver a 120 MW/240 MWh battery energy storage system (BESS) in Saleux, northern France. The project represents Envision's first independent storage contract in the French market and signals its continued European expansion.

Which battery energy storage system will be fully operational in 2025?

Harmony Energy, a leader in battery energy storage across Europe, has begun the construction of the Chevire Battery Energy Storage System (BESS) in Nantes, which is expected to be fully operational by winter 2025.

Why do we need a battery energy storage system in France?

"Battery energy storage installations will be necessary throughout France to provide essential services and support the rapid evolution of the energy landscape. They will facilitate electrification, the integration of renewable energy, the security of our supply, and help control costs for both the network and the customer.
