

## SolarInvert Energy Solutions

# French grid-side energy storage project

## Overview

---

Lisbon-headquartered renewable energy company TagEnergy has launched construction of France's biggest battery energy storage system (BESS). Tesla will contribute to the project also, offering market access services and its expertise in advanced storage solutions. Will Tesla build France's biggest battery energy storage system?

Lisbon-headquartered renewable energy company TagEnergy has launched construction of France's biggest battery energy storage system (BESS). Tesla will contribute to the project also, offering market access services and its expertise in advanced storage solutions.

Why do we need a battery energy storage system in France?

"Battery energy storage installations will be necessary throughout France to provide essential services and support the rapid evolution of the energy landscape. They will facilitate electrification, the integration of renewable energy, the security of our supply, and help control costs for both the network and the customer.

How much battery storage capacity is available in France?

To date, approximately 1 GWh of battery storage capacity is operational in France. The completion of the Cheviré BESS will represent a 20% increase in installed energy capacity. To support the deployment of renewable energy production in France, the French grid operator RTE anticipates total storage capacity in the range of 12 to 15 GW by 2050.

Will a battery energy storage system lift France's existing fleet?

French storage developer Acacia has formed a joint platform with Eren Industries to roll out more than 500 MW of stand-alone battery energy storage systems (BESS) across France—a capacity that would lift the country's existing large-scale fleet by roughly half.
