

## SolarInvert Energy Solutions

**How long does it take for photovoltaic modules to be replaced with batteries**

## Overview

---

To replace a solar battery, the time required can vary significantly based on several factors, including 1. type of system, 2. number of batteries installed, 3. complexity of installation, and 4. technician experience. Generally, it may take anywhere from a few hours to a full day. How often should a battery be replaced?

If you are within the warranty period replacements should be free. The lifespan of each component depends on how much it is used and how well it is maintained. For example, you will need to replace a battery that is charged and discharged every day sooner than a battery only used occasionally. The average lifespan of each component varies.

How long does a microinverter last?

Leading manufacturers like Enphase offer extended warranties of 25 years on their microinverters. String inverters typically come with warranties ranging from 5 to 12 years, with options to extend. Microinverter warranties are often more robust, with many covering up to 25 years.

How long does a string inverter last?

String inverters typically come with warranties ranging from 5 to 12 years, with options to extend. Microinverter warranties are often more robust, with many covering up to 25 years. We include inverters under our comprehensive 30-year warranty, ensuring you won't have to worry about unexpected replacement costs during that period.
