

## SolarInvert Energy Solutions

# Huawei s rooftop photovoltaic panels in Sri Lanka

## Overview

---

Should solar PV systems be installed on rooftops?

The majority of Solar PV systems are installed on premises rooftops. However, this poses a high risk of falling, so safety measures should be taken. These include using appropriate scaffolding, suitable access provisions, safe lifting procedures, and suitable labeling and warning signs.

How to install a PV array on a roof?

To install a PV array on a roof, mount the array above and parallel to the roof surface with a standoff of 100 mm for cooling purposes. Ensure that the mounting structure is anchored to the roof structure, not the roofing material. All roof penetrations should be weather sealed.

Can PV modules be installed on a roof?

PV modules can be installed on roofs, but they may increase the risk of flying objects in high wind if not properly secured. Therefore, the mounting structure should consider this risk during design and installation.
