

SolarInvert Energy Solutions

Huawei square lithium battery

Nominal Capacity

280Ah

Nominal Energy

50kW/100kWh

IP Grade

IP54

Overview

Does Huawei make batteries?

Even though Huawei doesn't manufacture batteries, the company is putting plenty of R&D resources into developing a new solid-state battery tech. The newest patent reveals a battery pack that can go for 1,860 miles away from the plug and fully charge in just five minutes. This is perhaps one of the craziest technologies we've heard so far.

Is Huawei developing a solid-state battery?

According to the patent, Huawei is developing a solid-state battery architecture with an energy density between 400 and 500 Wh/kg—reportedly three times higher than that of conventional lithium-ion cells used in today's electric vehicles.

How much power does a Huawei battery have?

5.000 Wh Storage Capacity: This battery has a capacity of 5.000 Wh. This is equivalent to 5.000 W for a period of 1 hour. If this is not enough autonomy, you can add multiple batteries to your cart. The capacity simply adds on.
3.500 W Output Power: Huawei battery has an instantaneous output of a maximum of 3.500 W.

How does a lithium ion battery work?

According to the patent application, its batteries use a method that 'dopes' sulfide electrolytes with nitrogen to address side reactions at the lithium interface. However, it is keeping the remainder of its technology close to its chest, as the race to mass-produce solid-state battery technology safely and at scale is well and truly on.

Will Huawei's 500 Wh kg⁻¹ chemistry leapfrog today's Li-ion?

Huawei's 500 Wh kg⁻¹, five-minute-charge claim lands just as multiple global OEMs lock in 2028 launch dates. Whether Huawei's design proves

manufacturable or merely monetised via royalties, it sharpens industry focus on dry solid-state as the chemistry most likely to leapfrog today's Li-ion before the decade is out.
