

SolarInvert Energy Solutions

Illegal installation of a 125kWh inverter for a communication base station

Overview

Do solar inverters contain undocumented cellular radio devices?

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular radio devices not disclosed in product specifications or technical documentation.

Are Chinese solar power inverters connected to critical infrastructure grids?

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected to critical infrastructure grids across the country.

Could remote inverters destabilize power grids?

Energy security experts warn that coordinated remote manipulation of these devices could destabilize power grids and trigger widespread blackouts, particularly as Chinese-made inverters now control a substantial portion of renewable energy capacity in the United States and Europe.

Do solar power inverters have a firewall?

Although inverters are designed for remote access to facilitate updates and maintenance, utility companies typically implement firewalls to block direct communication with China and safeguard their systems. Reuters was unable to determine how many solar power inverters and batteries they have looked at.

Is Chinese inverter equipment undocumented?

Reuters analysts identified that the undocumented equipment has been found in multiple Chinese inverter models over the past nine months, with similar discoveries in battery storage systems from various Chinese manufacturers.

Could undocumented communication devices be in Chinese batteries?

Reuters also claimed one source revealed undocumented communication devices had been found in some batteries from multiple Chinese suppliers. The devices could provide additional, undocumented communication channels that could allow firewalls to be circumvented, according to Reuters. pv magazine cannot verify this information.
