

SolarInvert Energy Solutions

Indoor container power generation installation

Overview

How to install shipping container electricity?

There are three ways you can opt for shipping container electricity installations: you can do it yourself, outsource the work to a container modification expert, or buy a container pre-installed with all the electrical utilities.

Do shipping containers have electricity?

Modern shipping containers can accommodate electrical cables and outlets, fixtures, and accessories or even function as a battery or power source for supplying energy to electrical equipment in remote locations. Shipping containers with electricity are a cutting-edge solution, especially when you need more than just storage.

What size generator container do I Need?

Our generator containers for Type 2, 3, and 4 gas engines have a standard 40-foot length. Width and height depend on engine type, the application (power generation only or CHP) and ambient conditions. Customized sizes to accommodate special project requirements are available on request.

How do I power a container structure?

If your container structure lies close to a power grid, you can use an appropriate, rated aerial cable (which can provide the required current and function as a ground wire) to power the structure. You must secure the aerial cable above the ground level using posts or tree trunks for safe operations.

Which genset containers are available?

All genset containers are also available with an option for -40°C and most variants can be upgraded for +45°C. A broad range of options, both mechanical and electrical, are available to ensure that our containers meet the project requirements. For example, we offer several heat recovery

configurations and exhaust after treatment systems.

What is the standard ventilation for genset containers?

The standard ventilation is designed for ambient temperatures from -25°C to +40°C. The genset containers can be equipped with several additional features to enable operation at lower temperatures on request. Type 6 containers are available with a similarly broad range of options that we offer for the Type 2 / 3 / 4 containers.
