

SolarInvert Energy Solutions

Investment prospects of battery energy storage companies

Overview

Why should you invest in battery storage?

The battery storage sector stands at the nexus of global energy transition, presenting a compelling investment opportunity driven by an accelerating shift to renewables, surging electricity demand from new industrial loads, and supportive policy frameworks worldwide.

Why should you invest in Invinity batteries?

For investors, Invinity offers pure-play exposure to vanadium flow batteries—a durable, fully recyclable complement to lithium-ion. Electric vehicle (EV) adoption is one of the main drivers of energy storage technology. Solid-state batteries promise the holy trinity: higher energy density, faster charging, and inherent safety.

Why is PE investment in battery energy storage growing?

PE investment in battery energy storage systems is surging, fueled by their high return potential and growing energy transition demands. PitchBook data shows that PE investments in energy storage and infrastructure have more than doubled since 2014, reaching \$21.1 billion in 2024 alone.

Is battery storage a fundamental part of energy infrastructure?

“Battery storage is now viewed as a fundamental part of energy infrastructure, much like LNG terminals and oil tankers,” said Gresham House infrastructure and energy transition investor Lefteris Stakosias. Stakosias said this investment boom reflects a broader shift in the global energy market toward renewables.

Are battery projects a good investment?

As a result, returns are reaching up to 30%. David Scaysbrook, cofounder of Quinbrook Infrastructure, highlighted that some battery projects can even achieve payback periods as short as three years, making them an increasingly

attractive investment for PE firms.

Why is a battery storage company important?

These companies are critical to the battery storage ecosystem, providing the fundamental materials required for battery production. Their market position and operational efficiency directly impact the entire supply chain.
