Is solar power generation a good option for households in the Bosnian market

Overview

Since small-scale solar competes with end user electricity prices instead of wholesale electricity prices, solar PV is becoming an attractive investment for some groups of consumers in Bosnia and Herzegovina already. However, a range of regulatory and legal barriers continue to hold investment back. Is Bosnia and Herzegovina a good place for solar energy?

He came to this recent conclusion after two years of researching the Balkan country's current renewable energy capacity and potential. Farooq Sher, associate professor at Nottingham Trent University, told pv magazine that the southern region of Bosnia and Herzegovina is perfect for large-scale solar rollout.

Is Bosnia and Herzegovina primed for 'huge' solar development?

Bosnia and Herzegovina's southern region is primed for "huge" utility-scale solar development, Assistant Professor Farooq Sher tells pv magazine. He came to this recent conclusion after two years of researching the Balkan country's current renewable energy capacity and potential.

Which country is best for solar power?

Herzegovina in particular is optimal for solar as it records 2,400 hours of annual sunlight. "The south side has huge solar capacity," he said. "Most of the year there it is sunny even in the wintertime." According to the paper, the amount of radiation is roughly 1,500 kWh/m² per year, which is "very significant" for PV.
