Laos Emergency Energy Storage Power Supply

Overview

What is Lao PDR's primary energy supply?

Lao PDR's Primary Energy Supply The heavy reliance of Lao People's Democratic Republic (Lao PDR) on fossil fuels made oil and coal account for 64% of the country's total energy supply mix in 2020 (Figure 2.1).

Does Lao PDR supply electricity to neighbouring countries?

Thus, electricity generated in Lao PDR can be supplied domestically as well as exported to neighbouring countries. The power transmission system of Lao PDR is divided into two types of transmission lines – one for domestic supply and one for export, where power plants are directly connected to neighbouring countries.

How can Lao PDR improve regional energy security?

Opportunities exist in Lao PDR to enhance regional energy security through deep integration with neighbouring countries' power grids through the transmission network of the Association of Southeast Asian Nations (ASEAN). 2.2.

What is the power sector in Lao PDR?

The power sector in Lao PDR is governed by MEM. The power system generators for domestic supply are the IPPs and EDL-Generation Public Company (EDL-Gen). The domestic transmission and distribution company (i.e. 115-kV and distribution lines) is EDL, and the domestic transmission company (i.e. 500-kV and 230-kV lines) is EDL-T.

How much energy does Lao rely on fossil fuels?

The heavy reliance of Lao People's Democratic Republic (Lao PDR) on fossil fuels made oil and coal account for 64% of the country's total energy supply mix in 2020 (Figure 2.1). Figure 2.1. Lao PDR's Total Energy Supply TJ = terajoule. Source: IRENA (2023).

Does Lao PDR have a coal reserve?

Source: IRENA (2023). The country's abundant coal reserves, which have a reserves–production ratio of more than 100 years (Table 2.1), contribute to the country's high coal supply security. Coal serves as Lao PDR's major additional source of electricity generation, supplementing hydroelectric power.
