

SolarInvert Energy Solutions

Lithuania Intelligent Communications BESS Power Station Company

Overview

How much state-aid for Bess projects in Lithuania?

Considering the EUR 102 million state-aid fund for BESS projects in Lithuania and the 500 MWh cap per entity and its related undertakings, the aforementioned subsidiaries of the Group have submitted applications for state-aid for Kelmė and Kruonis projects.

Who will provide the equipment and integration services for Bess projects?

The German company Rolls-Royce Solutions GmbH will provide the equipment and the integration services for all three BESS projects. Two projects in Kelmė (147 MW power; 294 MWh storage capacity) and Mažeikiai (45 MW power; 90 MWh storage capacity) districts are located next to wind farms operated by Ignitis Renewables.

What does the Bess group do?

The Group will ensure that the information and generation control systems of the BESS will be protected against remote access from countries identified as posing a threat under Lithuania's National Security Strategy. The Group reminds that its objective is to increase its Green Capacities from 1.4 GW in 2024 to 4–5 GW by 2030.

Why do we need a Bess system?

BESS can store energy when it is abundant and use it when it is needed the most. They help ensure the network stability even during fluctuations in the solar or wind generation. This solution contributes to a cleaner, more reliable and sustainable energy future.
