

## SolarInvert Energy Solutions

# Mali outdoor power supply specifications

## Overview

---

What is the power access rate in Mali?

The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015). Power generation is limited (Annex A.17), forcing Energie du Mali (EDM, the power utility) to have recourse to frequent load shedding.

What is the energy access problem in Mali?

Mali faces a critical energy access challenge. The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015).

Why is energy du Mali struggling with load shedding?

Power generation is limited (Annex A.17), forcing Energie du Mali (EDM, the power utility) to have recourse to frequent load shedding. EDM's difficulties stem from the discrepancy between the average price (CFAF96 per KWh) and the power production cost (CFAF130 per kWh) in 2019.

How can Mali improve the energy sector?

The unreliable electrical grid is the main barrier to the development of the mining sector, one of Mali's most important industries. To address these challenges, the transition government is working to expand electricity supply, including off-grid solutions in rural areas, and encourage investment in the energy sector to stimulate the economy.

Are onsite generators a viable option for mining companies in Mali?

Many companies resort to onsite generators to power their activities, though this is an expensive solution that is difficult to execute at scale. The unreliable electrical grid is the main barrier to the development of the mining sector, one

of Mali's most important industries.

How is energy du Mali financed?

Energie du Mali (EDM), the state-owned electric utility, is poorly managed and heavily subsidized by the government and financed by regional multinational banks, as the relatively high price of its electricity (average \$0.16/kWh) is insufficient to cover the cost of production and distribution (\$0.24/kWh).
