

## SolarInvert Energy Solutions

# Manufacture emergency communication command base station

## Overview

---

What is a two-way emergency communication system?

The Command Center Two-Way Emergency Communication System is designed to provide efficient two-way, person-to-person voice communication for Area of Refuge, accommodating an impressive range of 1 to 116 Call Boxes. Utilizing a home run configuration with only one pair of wires needed between each Call Box and the head end.

Are call boxes a code-compliant emergency communication system?

Each Area of Refuge requires hands-free, two-way emergency communication devices (Call Boxes) on each floor above/below the main exit floor. A code-compliant two-way communication system for rescue assistance requires a central control point to manage emergency assistance calls from call boxes.

What is a Mobile Emergency Response Center (MERC)?

Communicate in Times of Crisis with our Mobile Emergency Response Centers (MERC). Mobile command centers provide power and communication solutions for emergency response and business continuity. We provide both new units and renovations for existing command vehicles.

What is the IP command center two-way communication system?

The IP Command Center Two-Way Communication System is more than just a communication tool; it's a comprehensive solution that integrates with your existing network. Designed to handle between 1-128 call boxes, it leverages Voice Over Internet Protocol (VOIP) to provide seamless two-way communication.

What is a mobile command center?

Our Mobile Command Centers, also known as Mobile Emergency Response Centers (MERC™), are deployed in countries around the world. Our clients range from the private sector to local, state and federal governments. We are

trusted by some of the largest organizations in the world, because of our extensive experience in telecommunications technology.

What is emergency communication system monitor (ecsm-1)?

Signage is a required and critical part of an Area of Refuge or Two-Way Emergency Communication System. The Emergency Communication System Monitor (ECSM-1) is a server-based application that monitors events and provides timely alerts for Area of Refuge Systems.
