Mobile Power Battery

Overview

Can a portable power station charge a phone?

Some can only charge phones, and others can power your entire house. Check the output wattage and battery capacity to see what a portable power station is capable of. The Westinghouse iGen160s is a basic little power station capable of keeping your electronics charged during a brief power outage or camping trip.

What types of batteries are used in portable power stations?

The two main classes of batteries you'll see right now in portable power stations are LiFePO4 and NCM. LiFePO4 batteries utilize lithium, iron, and phosphate, and are considered safer and longer lasting than other batteries.

What is a portable power station?

A truly portable power station will be light and small, but it won't be able to do as much as the huge ones. It all depends on what you need. The smaller power stations are usually great at charging phones, tablets, powering small appliances, etc.

Are AMP portable power stations rechargeable?

Our portable power stations can be configured with AC, DC, and USB ports customized to your specifications. A quiet alternative to gas generators, AMP Portable Power Stations are rechargeable and ready to go anywhere you need an off-grid source of rugged, reliable power.

How do I charge a portable power station?

All portable power stations can be charged from a wall outlet and should come with a charging cable. Some power stations can also be charged via a car port from your vehicle or a solar port from solar panels. Make sure you check that the ports you want are available and necessary cables are included.

How much power does a battery use?

In power stations, battery capacity is typically measured in Wh (watt hours). To put things into perspective, a phone has about 5-15Wh of capacity. A smaller full fridge can use about 300Wh in one hour. A TV commonly uses about 200Wh in one hour.
