

## SolarInvert Energy Solutions

# New Energy Replacement Battery Cabinet

## Overview

---

Why do we need a backup battery cabinet?

Through cutting-edge research and innovation, advanced engineered power products for backup battery cabinets have become essential to our energy future. When the power goes out, battery backups ensure that the Internet, cloud-based data, financial and health records stay accessible.

How does a NiZn battery cabinet work?

Since the UPS doesn't "know" that the NiZn battery string has a different chemistry, it operates the string just as it would for its previous lead-acid inhabitants. This way, ZincFive's UPS Battery Cabinet's specialized profile allows operators to use NiZn battery cabinets as "drop-in" replacements.

What is a C&C power battery enclosure?

C&C Power Battery enclosures are configured to meet the need of all types of applications. Battery cabinets are engineered for an uninterrupted power backup source to support the continuous operation of your critical facility.

Why do we need a battery enclosure?

When the power goes out, battery backups ensure that the Internet, cloud-based data, financial and health records stay accessible. The role of batteries in producing emergency power supply for industries across the country is vital for our infrastructure. C&C Power Battery enclosures are configured to meet the need of all types of applications.

Which battery chemistry is best for a data center?

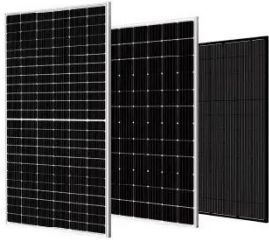

The lead-acid battery was the first chemistry used and remains popular today, but alternative battery chemistries such as lithium-ion and nickel-zinc offer compelling value propositions driving many data center end users and OEMs to switch to a new battery chemistry.

Are NiZn batteries a good choice for data center backup?

As rack-level compute density rises, so do the requirements for backup power in smaller, safer footprints. With their high power density, longer lifespan, sustainability and greater reliability, NiZn batteries are the ideal choice for backing up the increasing data center loads.
