New Zealand 365w double glass panels

Overview

Does New Zealand require double glazing?

Compliance with the New Zealand Building Code – Low-E double glazing is now typically required in new builds. For most homes in New Zealand, double glazing offers a significant improvement in warmth and efficiency. However, in colder regions or noise-prone areas, triple glazing may provide additional benefits.

Does thermalframe offer double glazing?

Thermalframe works closely with Metro Glass to provide total window and door solutions to our customers. We partner with New Zealand's largest glass specialist to provide the best possible double glazing units. Our standard double glazing always features thermal spacer bars and argon gas. Our showroom has a range of different options on display.

What is AGP glass – New Zealand's best performing double glazing?

Design Windows are proud to be agents for AGP Glass – New Zealand's all-round best performing double glazing*. The AGP System is a high-performance system that uses the best components and technology available in New Zealand.

Does Kiwi double glazing offer low E glass?

Create comfort all year round with KDG's Low E glass. With Kiwi Double Glazing's quote calculator, you can get a very accurate estimate for double glazing your existing windows in minutes. Simply choose your rooms, select your window frame and enter your window measurements. Enter your email address to receive your free quote instantly.

What is low E double glazing & triple glazing?

Metro double-glazing Low E glass can reduce the amount of power needed to keep your home at a comfortable temperature year round. Looking for high-

performance low E double glazing & triple glazing glass?

Explore the superior performance of low e-glass & reduce heat loss in your home or office.

What types of glass are available for double glazing?

There are many different types of glass available for double (and triple) glazing other than standard clear glass, including: low-emissivity glass (also known as low-E glass) lets light and heat in, but helps prevent heat from escaping.
