

## SolarInvert Energy Solutions

# Niue power station photovoltaic panel manufacturer

## Overview

---

When will Niue's New Power Station be built?

Today, the Deputy Prime Minister of New Zealand, Rt Hon. Winston Peters is here to break ground on what will become a cornerstone of Niue's renewable energy infrastructure. The new power station, funded through contributions from both Australia and New Zealand, is slated for completion and commissioning by mid-September.

What does the Minister of infrastructure say about Niue's New Power Station?

The Minister of Infrastructure, Hon. Crossley Tatui extended his appreciation to the Australian and New Zealand Governments, saying, "The construction of this new power station is a vital piece of infrastructure for Niue's development and well-being. This achievement would not have been possible without the support of our regional partners."

Does Niue have a diesel generator?

The small island nation of Niue, like many other countries in the South Pacific, has relied on diesel generators for their electricity for decades. Niue has historically been supplied by four 500kVA diesel generators which distribute the electricity via two networks across the island.

When will Niue's energy project start?

The initial phase of clearing the surrounding land will be completed by the end of this year, setting the stage for physical construction to commence in early 2025. In 2015, Niue launched the Strategic Energy Roadmap, with the ambitious goal of reaching 80% renewable energy production by 2025.

How does Niue's Solar System work?

Diesel consumption has reduced alongside CO2 emissions. Practically speaking, this means on sunny days the diesel generators of Niue are often switched off for up to 12 hours. The solar system is connected to a 3MWh

lithium ion battery energy storage solution (BESS) connected to the grid at Niue's power station.
