

SolarInvert Energy Solutions

North Asia Solar Panel Purchase Sales and Inventory System

Overview

Where can I find a solar supply chain map?

Our map resources include: Sinovoltaics offers dedicated supply chain maps for North America, Europe, Southeast Asia, and India. Each map highlights the region's existing and future solar module manufacturers. Our maps also break down the area's critical suppliers for cells, wafers, ingots, and polysilicon.

Should you sell solar panels at a loss?

Solar products often experience periods of rapid devaluation. If you have unsold inventory in stock, these market conditions can mean you have to sell panels at a loss. This is less of a problem if you only buy equipment for your contracted jobs because you'll sell them at an agreed-upon price.

How do I choose the best solar solutions for my business?

Assess factors such as available space for solar installations, energy consumption patterns, regulatory requirements, and potential obstacles or limitations. This assessment will help you identify the most suitable solar solutions for your business and inform your vendor selection process.

How do I choose a solar energy vendor?

Selecting the right solar energy vendor is a critical step in the procurement process. Consider factors such as vendor reputation, experience, technical expertise, and track record of successful installations.

Do solar panels come with a warranty?

Similar to most products with long lifespans and complex engineering, like automobiles, every home or commercial solar installation includes warranties. In this case, solar panels come with two separate warranties — one for the equipment and one for performance. The equipment warranty might guarantee the product for 10-12 years without failure.
