Norway outdoor power supply quotation

Overview

Is Norway part of the European power market?

Norway is part of a joint Nordic power market with Sweden, Denmark and Finland, and is in turn integrated into the wider European power market through interconnectors to the Netherlands, Germany, the Baltic states, Poland and Russia. The last two interconnectors from Norway to Europe became operational during 2021.

Why is power trading important in Norway?

In the same way, power trading provides access to relatively low-cost power in dry years, and increases the value of Norwegian electricity in years when there is a surplus of power in the domestic market. The power market is an important tool for ensuring cost-efficient use of electricity resources.

Why are Norway's electricity prices so high?

Norway's trading capacity with other countries is high, and price levels in Norway are therefore strongly influenced by the cost of producing electricity in thermal power plants, and especially by the prices of coal, natural gas and emission allowances.

How many power exchanges are there in Norway?

European legislation is opening the possibility of multiple exchanges competing for customers in the same area. Two power exchanges operate in both the day-ahead and intraday market in Norway, these are Nord Pool and EPEX SPOT. Norway is currently divided into five bidding zones (NO1-NO5).

Does Norway have a surplus of power?

As a result of the large hydropower capacity, Norway has a considerable surplus of power in periods with good hydrological conditions, e.g. snow melting, periods with high precipitation, etc. During such periods of oversupply, it is typically profitable to export power from Norway to other

countries.

Why does Norway import electricity at night?

In thermal power systems, it is costly to regulate production, and there is wider variation in electricity prices during the course of a day. These differences mean that Norway can import electricity from abroad at night, when the price is lower, and export it during the day, when consumption and prices are higher.
