

SolarInvert Energy Solutions

Office building exterior wall solar panels

Overview

Can solar panels be installed in office buildings?

Office buildings are ideal for solar panel installation. They have plenty of unused square footage on their roofs to place solar panels. With a sizeable coverage area, your solar panels will generate large amounts of power to meet the demands of your building's energy consumption. Because solar energy is a renewable resource, it will never run out.

Can you use solar power for a professional building?

Offices and other professional buildings are well-suited to solar energy, as they require large amounts of electricity to power heating and cooling systems, lighting and electronics. Using solar power for professional buildings is also an eco-friendly alternative to traditional electricity that can save your company money on operational expenses.

What are the benefits of solar panels?

These benefits include minimal maintenance, reduced greenhouse gas emissions and decreased energy expenses. Solar panels harness energy from the sun to power your office building. This free, on-site electricity source reduces or eliminates your dependence on the national electric grid, resulting in significant savings on your energy bills.

Are solar panels a good investment?

You'll also get a great return on investment, as solar panels typically pay for themselves within several years. They have an average life span of at least 25 to 30 years. Switching to solar is a great way to update your building's exterior and increase its property value.

How long do solar panels last?

They have an average life span of at least 25 to 30 years. Switching to solar is a great way to update your building's exterior and increase its property value.

If you ever need to sell your building, many commercial buyers will pay more to have a built-in, reliable energy supply.

What is a K-series solar panel made of?

K-Series - Made with 5/32" (4mm) Kromatix™ colored front glass with an opaque back glass. Elemex® delivers Solstex® solar panels to building sites through our network of agents and installers.
