

## SolarInvert Energy Solutions

# Onsite Energy Outdoor Off-Grid Solar

## Overview

---

Both community solar and onsite solar can allow your business to enjoy electricity savings and support the environment at the same time. Onsite solar refers to all the ways in which a solar power system can be installed directly on your property. This includes: 1. Rooftop Solar 2. Carports / Solar Canopies 3. Solar.

Offsite solar solutions do not send clean electricity directly to your property. Once the energy from the offsite solar array enters the grid, there is no way to separate the “green” electrons.

Federal incentives, such as the solar Investment Tax Credit (ITC), and individual state clean energy initiatives have historically focused on growing the onsite solar market.

No matter which solution you go with, solar energy is an excellent opportunity to outshine your competitors. The Pivot Energy team is ready to support your business in.

Considering the following factors will help you decide between onsite and offsite solar for your business:

## Onsite Energy Outdoor Off-Grid Solar

---

### Onsite Solar 101 , Trio

Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.
