Photovoltaic DC combiner box foreign trade

Overview

How are PV DC combiner boxes tested?

PV DC combiner boxes are tested according to IEC-61439-2 and are constructed on the basis of the test results as well as assembled for the specific application. This ensures that each of the requirements of the target application is fully met.

What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I, V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

Why should you buy a DC combination box from Phoenix Contact?

The DC Combiner Boxes from Phoenix Contact satisfy this demand and also feature a space-saving housing. Our monitoring system for photovoltaic strings enables you to respond immediately to malfunctions and power losses, even when individual strings fail.

What is a DC combination box?

In addition, the DC Combiner Box monitors the system performance and protects the individual modules against damage from overvoltage. Specialists who design and build photovoltaic systems face the challenge of achieving maximum availability and performance of photovoltaic systems.

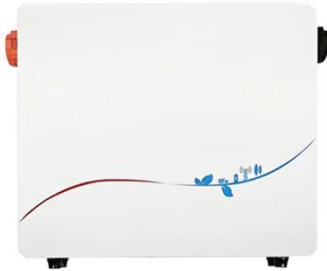

How does a DC/DC converter work in a photovoltaic system?

With the DC/DC converters, control cabinets are supplied directly from the photovoltaic system. Connectors designed for field assembly are ideal for cabling photovoltaic systems. Wireless communication in PV systems: The wireless system transmits I/O signals or serial data.

What is a DC/DC converter?

DC/DC converters ensure the direct, autonomous supply of power to the string monitoring units within the system. This means that an additional 230 V AC supply is not required. Surge protection and fuses are used to protect the string combiner boxes against external influences such as residual currents and lightning.
