

## SolarInvert Energy Solutions

# Photovoltaic energy storage project repurchaser

## Overview

---

Are hybrid PPAs a viable solution for co-located solar and storage?

Hybrid PPAs are an emerging solution to the challenge of maximising the commercial value of co-located solar and storage. Image: Business Wire. The co-location of renewable generation and energy storage demands new contractual arrangements to make such projects commercially viable.

Does CleanCapital have a solar portfolio?

CleanCapital acquired its first new build solar portfolio in 2021 and established an in-house construction team. They currently have over 40 MW of solar projects under construction. The energy transition requires a massive deployment of energy storage systems to stabilize the grid and ensure a resilient, sustainable clean energy future.

How many solar projects has CleanCapital acquired?

CleanCapital has acquired more than 200 operating solar projects spanning 26 states and one U.S. territory. In 2021, CleanCapital acquired its first new build solar portfolio and established an in-house construction team. Currently, they have over 40 MW under construction.

Are hybrid solar projects outperforming stand-alone solar projects?

One signal is that the volume of hybrid solar projects seeking approval substantially outgrew that of stand-alone projects (according to Pexapark research, these figures stood at 3.4GW and 921MW respectively, as of Q1 2023).

How many co-location configurations are there in renewable generation co-located with a battery?

In the case of renewable generation co-located with a battery, Pexapark's research suggests there are generally three setups found in the market today, as set out in Table 1. Table 1. Co-location technical configurations. Source:

Pexapark.

Are hybrid PPAs a good solution for power infrastructure deals?

Jack Rankin, Miguel Valderrama and Brian Knowles of Pexapark explore how hybrid PPAs are becoming a favoured solution for structuring deals that capture the full value of both assets. In the world of power infrastructure, we may broadly define “co-located” assets as those that share a single connection to the grid.
