Photovoltaic module price judgment

Overview

Will price fluctuations affect the photovoltaic module market?

As the global energy transition accelerates, the photovoltaic (PV) industry, as a key component of renewable energy, continues to attract significant attention for its promising development prospects. However, price fluctuations in the photovoltaic module market remain a critical factor influencing the industry's growth.

How are photovoltaic module price adjustments affecting industry players?

The current round of photovoltaic module price adjustments has imposed significant operational pressure on industry players. Leading companies, with their high R&D costs, are at a disadvantage in the price competition. Meanwhile, small and medium-sized enterprises find it challenging to endure prolonged price wars.

What factors affect the cost of photovoltaic modules?

1. Cost Factors Driving Price Fluctuations The cost of photovoltaic modules is primarily composed of solar cells, glass, encapsulation film, and labor expenses.

Will photovoltaic module prices go down in 2025?

However, given the supply-demand pressures and the competitive landscape of the industry, photovoltaic module prices are expected to remain in a low adjustment phase in 2025. Smaller enterprises may intensify their inventory clearance efforts to survive, which could create temporary downward pressure on market prices.

How does overcapacity affect the price of photovoltaic modules?

In an environment of overcapacity, the selling price of photovoltaic modules gradually approaches cost, with some companies even selling below cost to reduce inventory, further driving downward pressure on prices.

Are photovoltaic power plants undercutting production costs?

Photovoltaic power plants undercut production costs of around \$0.01/kWh in 2020, in sunny regions, and the current PV price trend enables even lower production costs. The average costs shown in the Bloomberg chart above could be significantly undercut with new systems.
