# Photovoltaic module prices hit a new low

## Overview

---

Prices have begun to fall after a brief stabilization phase – declining by around 5% to 8% across all technology classes in recent weeks. This drop returns prices to levels seen at the beginning of the year, a range that remains unprofitable for most module producers. How are future photovoltaic modules priced?

Based on these market scenarios, future prices for photovoltaic modules were estimated using the “photovoltaic learning curve,” which builds on the historic experience that with each duplication in the total number of modules produced, the price per module fell by roughly 20 percent.

Did solar panel prices hit an All-Time Low in 2024?

EnergySage has released its 20th semiannual report, showing that residential solar panel prices hit an all-time low in 2024. Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30% year-over-year in 2024.

Does EnergySage offer incentives for solar installation?

On average, homeowners receive nearly \$10,000 in solar installation incentives with the help of EnergySage. The company also helps to connect you with federal incentives, like the Inflation Reduction Act's benefits that can save up to 30% of installation costs, as well as state tax incentives.
