

SolarInvert Energy Solutions

Photovoltaic solar panels and batteries sold separately

Overview

Should you choose solar panels or solar with battery storage?

Choosing between solar panels and solar with battery storage is a significant decision for your energy needs. If you want to harness the sun's power while ensuring reliability during outages and cloudy days, solar with battery storage might be the way to go.

Can you have a battery backup with solar panels?

The short answer is, yes you can. Although there are several advantages to having a solar battery backup, it's not essential for everyone. In this article, we'll explore some scenarios in which having battery storage with solar panels is beneficial, and some in which sticking with simple rooftop solar panels could be the way to go. Did you know?

.

Should I buy a battery with my solar kit?

Purchasing a battery along with your solar kit offers a pathway to energy independence from your utility company, especially when they provide a meager buyback rate for surplus energy you send to the grid. With a battery storage system in place, excess solar energy can be stored instead of sold to the utility for low rates.

Can you use solar panels without battery storage?

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs.

What is solar battery storage?

Solar battery storage enhances your energy independence by storing excess energy produced by your solar panels. This stored energy can be used during high-demand periods or when sunlight isn't available, such as during cloudy days or at night. Solar batteries store energy generated by solar panels through a charging process.

What is a solar energy collection device?

As used in this section, "solar energy collection device" means any device manufactured and sold for the sole purpose of facilitating the collection and beneficial use of solar energy, including passive heating panels or building components and solar photovoltaic apparatus.
